

MICHAEL D. HUYNH

952-491-1937 | mdanielwin@gmail.com | [LinkedIn Profile](#) | [GitHub](#) | Saint Paul, MN 55114

Data analytics professional with 5+ years of experience in survey data analysis, statistical modeling, and research communication across nonprofit, academic, and marketing environments. Expert in SQL, Python, R, and Excel, with hands-on experience converting categorical survey responses for econometric analysis and translating findings into plain-language reports for advocacy and executive audiences.

SKILLS

Marketing Analytics & Experimentation: Audience Segmentation, Marketing Experiment Design, Randomized Controlled Trials (RCT), A/B & Multivariate Testing, Lift & Incrementality Measurement, Causal Inference, Difference-in-Differences, Regression (OLS, logistic, probit, quantile), ARIMA Forecasting, Predictive Modeling

Programming & Data Platforms: SQL (joins, aggregation, window functions), Python, R, Stata, Snowflake, Databricks, BigQuery, dbt, Alteryx, Git/GitHub, Data Appends & List Processing, Data Cleansing & Quality Validation, Workflow Automation, Data Governance & Security Standards, Data Dictionaries & Metadata Documentation

AI-Assisted Workflows: AI Tools for Task Automation & Workflow Streamlining (Claude, Gemini, Power BI Copilot), Prompt Engineering for Data Sourcing & Research, AI-Assisted Code Debugging & Review, Natural-Language Data Querying

Visualization & Communication: Data Storytelling, PowerPoint Executive Presentations, Tableau (incl. geospatial mapping), Power BI (DAX), Looker, Looker Studio, QGIS, Interactive Dashboards, Microsoft Office (Excel, PowerPoint, Word, Teams), Plain-Language Research Communication

WORK, RESEARCH, & VOLUNTEER EXPERIENCE

U.S. AI & Labor Market Impact Study — Personal Project

January 2026 – June 2026

Independent Researcher

Remote

- Engineered automated Python ETL pipelines utilizing request sessions and exponential backoff to ingest and harmonize 5 years of large-scale U.S. Census microdata (CPS and BTOS) from multiple source systems.
- Built AI-assisted data-quality workflows using Claude (LLM) for prompt-based anomaly detection and missing-data screening, alongside custom cleaning logic filtering across technical sectors, to prepare 5 years of Census microdata for econometric analysis.
- Developed advanced econometric models, including difference-in-differences and multivariate regressions, to isolate correlations between regional AI exposure intensity, employment growth, entry-level wages, and total factor productivity.

Minnesota Public Radio

November 2024 – August 2025

Digital Analyst

Saint Paul, MN

- Executed customer and audience segmentation, cohort analysis, and data appends across Salesforce CRM, BigQuery, and REST API data for 3 multi-channel fundraising campaigns, building predictive churn models supporting a 25% quarterly revenue improvement.
- Designed and ran A/B and multivariate experiments optimizing mobile app engagement, analyzing GA4 app-stream event data through BigQuery raw exports to inform product and content decisions.
- Integrated CRM and cloud data into Power BI semantic models in partnership with the BBC, building attribution frameworks and presenting quarterly insights to C-suite, agency, and state government stakeholders.
- Automated recurring Excel/SQL reporting with scheduled weekly refreshes, building PivotTable summary reports and joining datasets via VLOOKUP to eliminate manual entry, saving 10 hours weekly.

Mediahub Worldwide

March 2021 – February 2024

Campaign Insights Analyst

Minneapolis, MN

- Implemented tracking pixels, data feeds, and API integrations with Meta and Google platform teams, monitoring campaign delivery and performance in Campaign Manager 360 (CM360).
- Designed marketing experiments, RCTs, and media mix models in Adobe Analytics, Adobe Target, and GA4, lifting quarterly lower-funnel conversions 15% through significance-tested optimization.
- Trained interns in data processing and analysis workflows and authored ad naming taxonomy documentation, standardizing data governance and quality controls across campaign accounts.
- Delivered competitive research and behavioral customer segmentation from Nielsen syndicated data, automating ETL reporting in SQL, Alteryx, and Tableau Prep for real-time attribution.

UCLA Law COVID-19 Behind Bars Project

September 2020 – May 2021

Volunteer Data Analyst

Remote

- Built ARIMA time series models in R to detect anomalous infection spikes across 12 prisons and detention facilities, flagging high-risk sites and relaying findings to advocacy stakeholders to prioritize health interventions.
- Authored weekly research reports translating carceral health data into clear, actionable findings for non-technical advocacy audiences, with review by senior team leadership prior to publication.

Minnesota Population Center

June 2019 – March 2020

Undergraduate Research Fellow

Minneapolis, MN

- Applied logistic regression, probit modeling, and machine learning methods to U.S. Census and Social Security panel data, estimating causal effects of ethnic first names on socioeconomic outcomes.
- Managed and cleaned large-scale panel datasets in Excel VBA and Stata, ensuring data integrity across historical administrative records prior to analysis.

EDUCATION

The University of Minnesota Twin Cities — Bachelor of Science: Sociology; Minor: Statistics

Graduated: May 2020
